$$1.) f(x) = \frac{3x^2 + 2}{6x^2 + 1} \cdot \frac{6x(6x^2 + 1) - (3x^2 + 2)12x}{(6x^2 + 1)^2}$$

$$= \frac{36x^3 - 36x^3 + 6x - 24x}{36x^4 + 12x^2 + 1}$$

$$= \frac{-18x}{36x^4 + 12x^2 + 1}$$

$$2.) f(x) = 4x^2 - 5x + 7$$

$$= 8x - 5$$

$$= 8 - 0$$

$$3.) g(x) = (3x + 1)(4x^2 - 2)$$

$$= 3(4x^2 - 2) + (3x + 1)0x$$

$$= 12x^2 - 6 + 24x^1 + 0x$$

$$= 12x^2 + 24x^1 + 0x - 6$$

$$= 36x^2 + 0x - 6$$
